The application has been amended as follows:

**In the claims:**

Please replace claim 2 with the following amended claim:

--2. (currently amended) An apparatus according to claim 1, wherein the amount of said oxygen in said patient flow line is at least 80% by volume.--

Please replace claim 6 with the following amended claim:

--6. (currently amended) An apparatus for supplying oxygen-enriched gas to a patient and to a high pressure storage tank, comprising: a low pressure, oxygen-enriched gas patient flow line for use by a patient; a separate moderate pressure, oxygen-enriched gas buffer flow line operatively connected to a buffer tank; said moderate pressure ~~beig~~ being greater than said low pressure; said patient flow line and said buffer tank flow line being prioritized so as to continuously supply said oxygen-enriched gas for use by a patient; a radial compressor operated by a power source other than said ~~oxygen-enriched~~ oxygen-enriched gas, said buffer tank solely and operatively connected said radial compressor; said radial compressor being capable of compressing said oxygen-enriched gas to a high pressure; and a high pressure storage tank for portable storage of said high pressure oxygen-enriched gas.--

Art Unit: 3743

Please replace claim 8 with the following amended claim:

--8. (currently amended) An apparatus according to claim 7, wherein the amount of said oxygen in said patient flow line is at least 80% by volume, and wherein said prioritization includes a determination of the oxygen-enriched gas operatively delivered to said radial compressor by an oxygen sensor and the operation of said radial compressor being terminated when said sensed oxygen-enriched gas is below a pre-determined oxygen level.--

Please replace claim 17 with the following amended claim:

--17. (currently amended) A process according to claim 16, where the pressure of said oxygen-enriched gas in said high pressure storage tank is at least 500 psi, wherein said radial compressor includes at least two piston cylinder assemblies radially arranged around a crank shaft, and said piston cylinder assemblies adapted to sequentially compress said oxygen-enriched gas from said first piston assembly through said last piston assembly.--
